

Pressure Reducing Valve

This pressure reducing valve regulates and maintains consistent downstream pressure in fluid systems. It is designed with threaded connections and an adjustable mechanism to set the desired outlet pressure.

Product Overview

Professional Pressure Control

This pressure reducing valve is engineered to regulate and maintain consistent downstream pressure across complex fluid systems. It offers a robust, durable construction suitable for water distribution, HVAC, and demanding industrial applications. With over 20 years of manufacturing expertise, this valve ensures high precision, cost efficiency, and reliable performance for professional fluid management.

Technical Specifications

Primary Features

- Adjustable outlet pressure mechanism
- Corrosion-resistant build
- Threaded connection type
- Suitable for HVAC and water systems

Model Code	Y00454
Connection Size	3/4 inch
Material Composition	Brass, Stainless Steel

Sustainability and Quality

Standards & Compliance
