

Pressure Reducing Valve with Flanged Connections

This pressure reducing valve automatically reduces and regulates fluid pressure within piping systems. It features flanged connections for straightforward installation and includes a pilot control system and pressure gauge for precise monitoring.

Product Overview

Precision Pressure Control

This pressure reducing valve is engineered to automatically regulate and stabilize fluid pressure within piping systems. Featuring a robust design with secure flanged connections, it ensures reliability in both industrial and commercial environments. The integrated pilot control system allows for precise adjustments, while the included pressure gauge provides real-time monitoring of downstream output.

Technical Specifications

Applications

- Industrial piping systems
- Commercial water distribution
- Fluid pressure regulation

Connection Type	Flanged
Monitoring	Integrated Pressure Gauge, Pilot Control System
Model Reference	PH16
