

Pressure Relief Valve

This safety valve automatically releases pressure when it exceeds a preset limit. It is designed to protect systems from overpressure in plumbing, HVAC, and industrial applications.

Product Overview

Safety and System Integrity

This pressure relief valve is engineered to provide critical overpressure protection for boilers, heating systems, and domestic hot water cylinders. By automatically discharging excess pressure when calibrated limits are reached, the device prevents potential system failures and structural damage. Built with high-quality materials for reliability, this component is essential for maintaining safety in plumbing, HVAC, and industrial water systems.

Technical Specifications

Operating Temperature Range

5 °C

Minimum

110 °C

Maximum

Pressure Range	0.1 - 0.5 bar
Rated Pressure Capacity	6 bar
Compatible Media	Water, Air

Construction & Materials

Body Material	Brass
Spring Material	Stainless steel

Installation

Connection Size	22mm (approx. 1/2 inch)
