

# Pressure Switch for Water Pump

This pressure switch is designed for use in water pumps and air compressors. It regulates pressure within the system to ensure optimal performance and safety.

## Product Overview

### Professional Pressure Control

This pressure switch is engineered for precision regulation in water pump and air compressor systems. Built with robust metallic components and high-quality electrical contacts, it ensures consistent operational safety and efficiency. The intuitive design facilitates straightforward installation and field adjustment, making it a reliable solution for various pressure control applications.

## Technical Specifications

### Build Quality

- Robust metallic housing components
- High-precision spring mechanism
- Industrial-grade electrical contacts
- Protective safety enclosure

### Application Compatibility

Water Pumps, Air Compressors

### Installation

Easy installation with field-adjustable pressure settings.
