

Pressure Switch for Water Pumps

This pressure switch is designed for water pumps. It automatically controls the water pump based on the system pressure, ensuring efficient and consistent water supply.

Product Overview

High-Performance Pressure Switch

This pressure switch is engineered to automatically control water pumps based on system pressure, ensuring an efficient and consistent water supply. Its robust design features a durable enclosure suitable for demanding residential, agricultural, and industrial environments. The unit includes standard threaded connections, allowing for straightforward integration with a wide variety of existing plumbing systems.

Technical Specifications

Installation Features

- Standard threaded connections
- Automated pressure-based control
- Durable protective enclosure

Build Quality

Robust Design • Reliable Performance

Applicable Use Cases

Residential, Agricultural, Industrial
