

Printing Machinery Alignment Pin

This specialized machinery part is used for plate making and printing processes. It features a threaded cylindrical body, a knurled central section, a flanged collar, and a pointed tip for precise alignment and secure fastening.

Product Overview

Precision Alignment Solution

This specialized alignment pin is engineered for high-precision tasks within plate-making and printing machinery. Featuring a robust design with a threaded body and knurled central section, it ensures secure fastening and accurate positioning during critical printing operations. Its flanged collar and pointed tip facilitate seamless installation and reliable performance in demanding industrial environments.

Technical Specifications

Core Function

Alignment • Fastening

Design Features

Threaded Body, Knurled Grip, Flanged Collar, Pointed Tip

Primary Application

Plate-making and printing machinery
