

Prismatic Lithium-Ion Battery

High-capacity prismatic lithium-ion rechargeable batteries are designed for applications requiring high energy density and reliable performance. They feature robust terminals for secure connections and a compact form factor for efficient integration into devices.

Product Overview

High-Performance Prismatic Battery

This prismatic lithium-ion battery is engineered for applications requiring high energy density and consistent power delivery. Its compact form factor and robust terminal design allow for efficient integration into a wide range of devices, from power tools to portable electronics and energy storage systems. Built for reliability, this cell provides a stable power source for demanding professional use.

Key Metrics

Capacity

10000 mAh
Capacity

Nominal Voltage

3.7 V

Identification

Model Number

TNL-1765133SHC

General Specifications

Battery Chemistry

Lithium-Ion

Form Factor

Prismatic

Applications

Recommended Applications

Power Tools, Portable Electronics, Energy Storage Systems
