

Professional Audio Encoder

This audio encoder is designed for IP network operation and supports UDP multicast mode. It offers low decoding complexity and substantially reduces network transmission bandwidth utilization.

Overview

Professional Audio Encoding Solution

This professional-grade audio encoder is engineered for high-performance broadcast and live sound environments. It features low decoding complexity and advanced compression algorithms to significantly reduce network bandwidth utilization. Designed for seamless integration, it supports flexible IP network operations and reliable UDP multicast transmission.

Technical Features

Compression & Bandwidth

- Low decoding complexity
- Substantial reduction in network transmission bandwidth
- Supports variable bit rate (VBR) transmission

Network & Connectivity

IP Network Operation, UDP Multicast Mode

Operational Control

Alarm Capabilities

- Audio loss alarm
- Alarm log support

Control Interface

Flexible LCD Panel Operation

Monitoring & Alarms

Yes
