

Professional Video System TV Component

Professional grade TV component designed for integration into broadcast or professional video systems. Features include front panel controls and indicators for monitoring and adjustment.

Product Overview

Professional Video System Integration

This professional-grade TV component is engineered for seamless integration into high-end broadcast and professional video infrastructures. Its rack-mountable architecture ensures efficient installation within standard equipment environments. Equipped with intuitive front panel controls and real-time status indicators, it provides operators with precise monitoring and adjustment capabilities during active use.

Technical Features

Chassis Design

Rack-mountable • Front-panel control

Primary Applications

- Broadcast systems
- Professional video signal processing
- System rack integration

Model Identification

DQ-3600II

Integrated Indicators

Power Status, Video Signal, Audio Signal
