Overview

Professional Profile Wrapping Solution

The Profile Wrapping Machine is a versatile, combined-type industrial system designed for applying decorative materials like PVC film, veneer, paper, and foil onto various substrates. Engineered for high efficiency and consistent quality, it integrates adhesive application, wrapping, and pressing into a single automated line. It is an ideal solution for manufacturing furniture components, door frames, and window profiles.

Technical Specifications

Wrapping Materials

- PVC film
- Veneer
- Decorative paper
- Foil

Model Identification

SH300C-II

Compatible Substrates

Wood, MDF, PVC, Aluminum

Performance

Operational Features

- Adjustable wrapping speed
- Precise adhesive temperature control
- Integrated adhesive and wrapping system
- Multi-roller guiding and support

Build Quality

Industrial Grade • Sturdy Frame • Automated Line
