

# Programmable Digital Thermostat

This programmable thermostat allows for precise temperature control. It features a digital display showing current time and temperature and is designed for easy integration with control systems.

## Product Overview

### Industrial-Grade Climate Control

The Programmable Digital Thermostat is a robust, precise instrument designed for seamless integration into industrial HVAC systems. It features an intuitive digital interface that displays real-time temperature and time, ensuring consistent environmental monitoring. This device provides highly accurate control, essential for demanding professional and industrial applications where reliability is critical.

## Technical Specifications

Model Identifier	BICQ-11
Temperature Precision	0.2 °C
Display	Digital

## Key Features

### Recommended Use

Industrial HVAC • Climate Control • Process Automation

### Core Capabilities

Programmable, HVAC Integration, Industrial Grade, Real-time Monitoring
