

Programmable Logic Controller for Automation

This programmable logic controller (PLC) is designed for automation and control applications. It allows precise control of machinery and processes in industrial settings.

Overview

Industrial Control Solution

This programmable logic controller (PLC) is engineered for precise automation and control applications in demanding industrial environments. Featuring a robust gray enclosure designed for standard DIN rail mounting, it integrates seamlessly into existing control cabinets. The device is equipped with multiple input/output terminals, providing the connectivity required for complex machinery management and process regulation.

Technical Specifications

Communication Protocol

DALI

Model Identifier

MT 730E

Mounting Style

DIN Rail

Terminal Blocks

Top-mounted I/O terminals

Housing Material/Color

Industrial Gray Enclosure
