

Programmable Timer Switch with Mechanical Dial

This programmable timer switch is designed for automated control of electrical circuits. It features a mechanical dial for setting on/off times with high precision.

Product Overview

Professional Time-Based Control

The TH-191 is a robust programmable timer switch engineered for the automated control of single-phase electrical circuits. Featuring a precise mechanical dial interface, it provides a reliable solution for scheduling lighting, heating, and various electrical appliances. This device is designed for seamless DIN rail mounting, making it an efficient choice for integration into professional control panels and enclosures.

Technical Specifications

Mounting Style	DIN rail
Control Interface	Mechanical Dial
System Compatibility	Single-phase AC

Key Features

Core Advantages

- Precise timing control
- Energy savings through automation
- Convenient time-based circuit switching
- Compact DIN rail installation

Ideal Applications	Lighting, Heating, Appliance Automation, Control Panels
