

Protective Relay Device

This protective relay device monitors and controls electrical systems. It features a display screen, indicator lights and control buttons for configuration and operation.

Product Overview

Advanced Protective Relay Solution

This protective relay device is engineered for reliable monitoring and control of critical electrical systems. Designed for industrial environments, it features a robust metal enclosure to ensure durability and protection. The unit includes an integrated display interface with intuitive control buttons for efficient configuration and operation.

Technical Specifications

Model Number	QS82110
Device Function	Microcomputer Transformer Differential Protection Device

Interface & Control

Interface Components

- LCD Display Screen
- Status Indicator Lights
- Reset Button
- Confirm Button
- Return/Back Button

Construction

Enclosure Material	Metal
Environment Suitability	Industrial, Electrical Systems
