

PS Foam Laminating Machine with Extruder

This PS foam laminating machine includes a cooling water tank and PS foam extruder. It is used in plastic machinery and industrial part production.

Product Overview

High-Efficiency PS Foam Laminating Solution

This integrated production line combines a specialized PS foam extruder with a precision laminating machine to create high-quality foam profiles, such as picture frames. The system includes a dedicated cooling water tank to ensure structural integrity and surface finish during the extrusion process. Designed for industrial performance, this machinery streamlines the manufacturing of decorative foam profiles with consistent output.

Technical Specifications

Integrated Components

- PS Foam Extruder
- Laminating Machine Unit
- Cooling Water Tank

Key Features

Integrated Cooling System • High-Precision Laminating • Continuous Extrusion

Primary Applications

PS Foam Profiles, Picture Frame Molding, Decorative Profiles, Industrial Plastic Parts
