

PTO Wood Chipper for Tractors

This wood chipper is a robust agricultural implement designed for efficient wood processing. It features a heavy-duty steel construction and is designed for tractor attachment, utilizing a PTO shaft for power transmission.

Product Overview

Efficient Wood Processing Solution

This tractor-driven wood chipper is designed for efficient processing of branches, top wood, laths, and slabs into wood chips or particles. It features a compact, robust steel construction that ensures stable performance during operation without affecting the host tractor's functionality. Ideal for land improvement, paper-making, and timber yard operations, this implement significantly expands the utility of your existing agricultural machinery.

Technical Specifications

Key Features

- Compact structure
- Stable performance
- High-efficient production
- Easy operation
