Product Overview

High-Performance Automated Snack Processing Line

This fully automatic processing line is engineered for the continuous production of puffed and core-filled snacks. Featuring an integrated system that handles mixing, extruding, shaping, cutting, drying, and flavoring in a single pass, it offers high operational efficiency. The versatile design allows manufacturers to produce a vast array of shapes and textures using a wide range of raw materials, ensuring product consistency and quality.

Technical Specifications

Automated production line constructed from high-quality stainless steel for hygiene and durability.

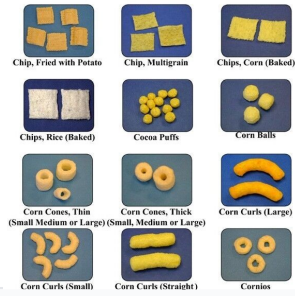

Production Stages

- Mixing
- Extruding
- Shaping
- Cutting
- Drying
- Flavoring

Compatible Ingredients

Corn, Rice, Wheat, Oat, Barley, Potato

Product Capability

The processing line enables the creation of diverse snack shapes including chips, puffs, balls, and cones.

Available Snack Shapes

- Rings
- Flowers
- Balls
- Strips
- Moons
- Stars
- Tubes
- Hearts
- Corn Curls
- Corn Cones

Advanced Capabilities

Core-filling • Full Automation • Modular Molds • Crispy Texture • Digestible
