

Pull-Up Baby Diaper Production Line

This automated machine is designed for the high-speed production of pull-up baby diapers. It integrates multiple processes including material feeding, cutting, folding, and sealing to manufacture diapers efficiently.

Product Overview

Advanced elastic waistband production module for superior diaper fit and comfort.

High-Efficiency Production System

This full servo pull-up baby diaper production line is engineered for high-speed manufacturing, integrating advanced material feeding, precision cutting, and automated folding. Designed for professional production environments, it features robust full servo driving systems and automated sealing technologies to ensure consistent quality and minimal waste. The modular design, coupled with high-speed crushing and blower units, provides the scalability and reliability required for large-scale disposable hygiene product manufacturing.

Technical Specifications

Integrated T-shape cutting technology designed to minimize material waste during high-speed production.

Drive Type

Full Servo

Model

JWC-LLK600-SV

Standard Configurations

Key Components

Component	Quantity
Main machine	1 set
High speed crusher	1 set
Blower wire	1 set
Simple packing machine	2 sets
Simple sealing machine	2 sets

Support & Accessories

Included Extras

- Free spare parts
- Comprehensive attachment list
