

Pump Performance Testing System

This integrated system is designed for comprehensive evaluation of pump characteristics and efficiency. It measures flow rate, pressure, and power consumption to determine overall pump performance.

Product Overview

Professional Pump Testing Solution

The Pump Performance Testing System is a robust, integrated platform designed for the comprehensive evaluation of pump characteristics and operational efficiency. It provides precise monitoring and control of critical test parameters including flow rate, pressure, and power consumption. Engineered for both laboratory and industrial environments, the system features a versatile pipe configuration setup to accommodate various pump sizes.

System Capabilities

Measured Parameters

- Flow Rate
- Pressure
- Power Consumption

Suitable Environments

Laboratory, Industrial

Control & Monitoring

Control Features

- Digital Display Monitors
- Manual Control Switches
- Parameter Adjustment Modules

Construction & Design

Design Specifications

Robust Frame Construction • Configurable Piping • Integrated Control Panel
