

Pump Performance Testing System

This pump performance testing system is designed for comprehensive evaluation and analysis of pump characteristics. It features a user-friendly interface with digital displays for monitoring key parameters.

Overview

Professional Pump Testing Solution

This pump performance computer testing system provides a comprehensive environment for evaluating and analyzing pump characteristics. Designed for industrial research, development, and quality control, it features real-time data acquisition capabilities for flow, pressure, voltage, and current. The robust, industrial-grade enclosure ensures reliability in demanding testing facility environments.

Key Features

System Components

- Central processing unit with dedicated monitor
- Digital parameter display interface
- Integrated keyboard and mouse
- Industrial-grade protective enclosure
- Precise control panel with switches and indicators

Monitoring Capabilities

Monitored Parameters

1 N/A
Flow Rate

1 N/A
Pressure

1 V
Voltage

1 A
Current

Applications

Target Applications

Research and Development, Quality Control, Pump Manufacturing, Performance Testing
