

Pumpkin and Melon Seed Shelling Machine

This pumpkin and melon seed shelling machine efficiently cracks and separates seeds. It is designed for businesses involved in seed processing, ensuring high throughput and minimal seed damage.

ADDITIONAL IMAGES

Product Overview

A high-performance shelling and separation unit for commercial seed processing.

Professional Seed Processing Solution

This patented seed shelling and sorting unit is designed for the efficient processing of pumpkin and melon seeds. The integrated system automates the entire workflow from feeding and dehulling to the separation of shells and kernels. Engineered for versatility, the machine can be adapted for hemp and sunflower seed processing with minor component adjustments, making it a highly reliable asset for commercial seed operations.

Technical Specifications

System Components

- Feeding hopper
- Screw elevator
- Main shelling unit
- Material receiving hopper
- Integrated fan
- Electric control cabinet

Supported Seeds

Pumpkin Seeds, Melon Seeds, Sunflower Seeds, Hemp Seeds

Operational Capabilities

Processing Flow

Step Order	Process
1	Feeding
2	Elevating
3	Dehulling
4	Shell and Kernel Separation

Support and Warranty

Maintenance and Support

The equipment includes lifelong maintenance support. Within the warranty period, defects resulting from design flaws are covered, including the replacement of parts free of charge. Technical support is provided for all users, including guidance for issues arising from human operation factors.

Warranty Period

One-year standard manufacturer warranty with lifelong maintenance support.
