

PVC Insulated Copper Conductor Power Cable

These cables feature PVC insulation and copper conductors. They are available in two-conductor and three-conductor configurations.

Product Overview

Reliable Power Transmission

This PVC insulated copper conductor power cable is engineered for consistent electrical performance in demanding assembly and production line environments. Featuring a durable copper conductor core and robust PVC insulation, it ensures safe and efficient power delivery. The cable is available in both two-conductor and three-conductor configurations to suit various industrial wiring requirements.

Construction & Materials

Insulation Material	PVC
Jacket Material	PVC
Conductor Material	Copper

Configuration

Available Configurations

- Two-conductor
- Three-conductor

Applications

Primary Use Cases	Assembly Lines, Production Lines, Power Transmission
