

PVC Insulated Power Cable with Copper or Aluminum Core

Power cable with a copper or aluminum core, insulated with PVC. It features optional armoring for mechanical protection and a PVC or PE sheath for environmental resistance.

Product Overview

Reliable Power Distribution

This PVC insulated power cable is engineered for versatile industrial and commercial power distribution applications. Featuring high-quality copper or aluminum conductors, the cable ensures consistent electrical performance. It is designed for durability, offering robust protection against environmental factors, with optional armoring available for enhanced mechanical strength.

Technical Specifications

Typical Applications

- Industrial power distribution
- Commercial power distribution

Conductor Material	Copper, Aluminum
Insulation Material	PVC
Sheath Material	PVC, PE
Mechanical Protection	Yes
