

PVC Plastic Drop Processing Oven

This oven is designed for processing PVC plastic drops with multi-mode operation. It features a conveyor and collection system for automated material handling.

Product Overview

Professional PVC Drop Processing Solution

This automatic oven is specifically engineered for the efficient processing of PVC plastic drops. It features an integrated conveyor system that streamlines material handling and ensures consistent results throughout the production cycle. Built for durability and precision, the unit includes a user-friendly control panel allowing for exact temperature and time adjustments to meet diverse application requirements.

Technical Specifications

Control System

- Precise temperature settings
- Programmable time controls
- Integrated control panel interface

Operation Modes

Multi-mode operation, Automated handling

Construction

Structural Design

Robust Frame • High Stability • Industrial Durability

Included Systems

Component	Function
Conveyor System	Automated material handling
Collection System	Processed material recovery
Control Panel	Operation management
