

Quartz Infrared Heater with Reflective Housing

This quartz infrared heater provides efficient and directional heating. The unit features a reflective metal housing with angled slots to maximize heat projection.

Product Overview

Efficient Targeted Heating Solution

The QH-1200C is a high-performance quartz infrared heater engineered for precise, directional warmth. Featuring a specialized reflective metal housing with integrated angled slots, it maximizes heat output and projection efficiency. Designed for durability, this unit provides reliable heating performance for diverse residential and professional commercial environments.

Technical Specifications

Heating Technology	Quartz Infrared
Projection Method	Directional
Housing Construction	Reflective Metal
Key Design Elements	Angled Projection Slots, Reflective Housing, Durable Construction

Application

Primary Applications

- Residential heating
- Commercial heating
- Targeted zone heating
