

Quartz Radiant Space Heater

This portable quartz radiant heater is designed for indoor use. It utilizes multiple quartz heating elements to provide efficient and directional warmth, with adjustable power settings and safety features like a tip-over switch and overheat protection.

Overview

Efficient Portable Heating

The Quartz Radiant Space Heater is a versatile, portable heating solution engineered for effective indoor climate control. Utilizing high-efficiency quartz heating elements, it delivers immediate, directional warmth exactly where it is needed most. With integrated oscillation for even heat distribution and multiple power settings, this unit provides a customizable and comfortable environment for various indoor spaces.

Performance & Operation

Control Interface

- Push buttons
- Indicator lights

Heating Technology

Quartz Radiant

Distribution Method

Oscillating base for even coverage

Safety & Durability

Safety Features

Tip-over switch, Overheat protection

Construction

Durable materials designed for stability and longevity
