

Quartz Ultraviolet Sterilizing Lamp

This quartz ultraviolet sterilizing lamp is designed for effective sterilization in various applications. It emits a specific wavelength of ultraviolet light that disrupts the DNA of microorganisms, preventing their replication and rendering them harmless.

Product Overview

Professional Ultraviolet Sterilization

This quartz ultraviolet sterilizing lamp provides a professional-grade solution for eliminating bacteria, viruses, and pathogens. Engineered with durable quartz glass, it ensures optimal UV transmission and long-term operational reliability. Its versatile design makes it ideal for integration into water purification systems, air sterilization units, and surface disinfection equipment.

Technical Specifications

Key Features

- DNA-disrupting UV wavelength
- Durable quartz glass construction
- Compact form factor
- Standard base for easy installation

Material	Quartz Glass
Suitable Applications	Water Purification, Air Sterilization, Surface Disinfection
