

Quick Disconnect Coupling for Machine Tools

This connector is designed for quick connection and disconnection of lines in machine tools. Its durable construction ensures reliability in industrial settings.

Product Overview

High-Performance Quick Disconnect Coupling

This quick disconnect coupling is engineered specifically for demanding machine tool environments, facilitating rapid and secure connection of fluid or pneumatic lines. Its robust design ensures minimal downtime during maintenance or tool changes, making it an essential component for industrial fluid management. Built for durability, this coupling provides reliable performance under the rigorous conditions typical of modern manufacturing facilities.

Technical Specifications

Construction

Industrial Grade • Durable Material

Application

Pneumatic Systems, Hydraulic Systems, Machine Tools

Connection Type

Quick Disconnect
