

# Radial Arm Drilling Machine

The radial arm drilling machine is designed for drilling, reaming, tapping, and spot-facing operations on large or irregularly shaped workpieces. Its radial arm allows flexible positioning of the drilling head over a wide area, enhancing efficiency.

## Overview

### High-Precision Radial Arm Drilling

This radial arm drilling machine offers a wide range of operational speeds with both manual and power feed options for versatile performance. Engineered for efficiency, the radial arm provides  $\pm 45^\circ$  tilt adjustment, allowing for precise positioning on complex workpieces. Main components are manufactured using high-precision machining centers, ensuring long-term reliability for tasks including drilling, counterboring, reaming, and tapping.

## Technical Specifications

Model ID	Z3032X7P
Drilling Capacity	32 mm
Radial Arm Tilt Range	$\pm 45^\circ$

## Features

### Core Functionalities

- Drilling
- Counterboring
- Reaming
- Tapping

### Quality Certifications

High Precision • Reliable Construction

Feed Mechanism	Manual Feed, Power Feed, Easy Engagement/Disengagement
