

# Radial Arm Drilling Machine

The radial arm drilling machine is designed for drilling, reaming, tapping, and spot-facing operations. Its radial arm swivels around a central column, enabling the drill head to reach a large area without moving the workpiece.

## Product Overview

### Versatile Precision Drilling

This radial arm drilling machine is designed for high-precision operations including drilling, counterboring, reaming, and tapping. Featuring a tiltable radial arm capable of  $\pm 45^\circ$  movement and a wide range of speed settings, it offers exceptional flexibility for complex workpieces. Built with high-precision components, this compact yet powerful machine ensures reliability and efficiency for demanding industrial tasks.

## Technical Specifications

Core Functions	Drilling, Counterboring, Reaming, Tapping
Arm Flexibility	Radial arm rotation with $\pm 45^\circ$ tilt capability
Feed Mechanism	Manual and power feeds with easy engagement and disengagement

## Performance Metrics

### Drilling Capacity

**32 mm**

Max Drill Capacity
