

Radial Arm Saw for Woodworking

This radial arm saw is a versatile woodworking tool designed for performing a variety of cutting operations. Its adjustable arm and blade angle provide flexibility for different cutting angles and dimensions.

Overview

Professional Radial Arm Saw

This versatile radial arm saw is engineered for high-precision woodworking operations, featuring a circular saw blade mounted on a robust sliding horizontal arm. Designed for efficiency, it allows for seamless execution of crosscuts, miters, bevels, and ripping tasks. The unit combines a powerful motor with adjustable arm and blade angles to ensure consistent, accurate results across various wood types.

Technical Specifications

Safety Mechanisms

Blade Guards • Emergency Stop

Design & Construction

- Sliding horizontal arm configuration
- Adjustable arm for flexible cutting angles
- Adjustable blade angle
- Robust construction for durability

Cutting Capabilities

Crosscuts, Miters, Bevels, Ripping
