

Radial Drilling Machine

This drilling machine features a drill head that can be moved along a radial arm. It is designed for drilling, reaming, tapping, and spot-facing operations on large or heavy workpieces.

Product Overview

Radial Drilling Machine Capabilities

This radial drilling machine is engineered for versatility and precision on large or heavy workpieces. Featuring a flexible radial arm and adjustable drill head, it allows operators to perform drilling, reaming, tapping, and spot-facing operations across various points without needing to reposition the workpiece. Its robust design, centered around a vertical column and swinging arm, ensures stability and ease of use in demanding industrial environments.

Technical Specifications

Design Features

- Adjustable radial arm
- Vertical column support
- Movable drill head
- Designed for large workpieces

Model Number	Z3732B
Supported Operations	Drilling, Reaming, Tapping, Spot-facing
