

Radial Fan for Refrigeration and Ventilation

This radial fan is designed for refrigeration and ventilation applications. It features a robust housing with curved blades to ensure efficient airflow in compressors and other machinery.

Product Overview

Industrial Radial Fan Solution

This radial fan is expertly engineered for high-performance refrigeration and ventilation requirements. Featuring a robust black housing and precision-curved blades, it ensures reliable and efficient airflow for demanding industrial environments. It is a versatile component ideally suited for integration into compressors and various cooling systems where consistent thermal management is critical.

Technical Specifications

Key Design Elements

- Robust black protective housing
- Multi-blade curved fan geometry
- Centralized motor assembly
- Optimized for high-flow ventilation

Compliance Status

Industrial Grade • General Machinery Compatible

Primary Applications

Refrigeration, Ventilation, Compressor Cooling, Industrial Machinery
