

Radial Fan Impeller for HVAC Systems

This radial fan impeller is designed for moving air or other fluids. It is commonly used in HVAC systems, cooling applications, and various industrial machinery.

Product Overview

High-Performance Radial Impeller

This radial fan impeller is engineered for efficient air movement in demanding HVAC and industrial cooling environments. Featuring a robust metal construction with precision-curved blades, it ensures optimal airflow and durability. Its versatile design incorporates a central hub with mounting points, making it suitable for a wide range of industrial machinery and climate control systems.

Technical Specifications

Blade Design	Radial / Curved
Material	Metal
Common Applications	HVAC Systems, Industrial Cooling, Air Handling, Machinery
Mounting	Central hub with multi-point mounting
