

Radial Fan Impeller for Ventilation

This radial fan impeller is designed for ventilation and exhaust applications. The impeller features a robust metallic construction with multiple curved blades optimized for efficient airflow.

Product Overview

High-Efficiency Radial Fan Impeller

This radial fan impeller is precision-engineered for ventilation and exhaust applications. Featuring a robust metallic construction with optimized curved blades, it ensures efficient and consistent airflow in demanding environments. Designed for seamless integration into air conditioning units, ventilation systems, and electric fans, it provides reliable, stable performance for both household and industrial use.

Technical Specifications

Usage Environment

Household • Industrial

Construction Material

Metallic

Blade Design

Curved blades

Application Types

Air Conditioning, Ventilation Systems, Electric Fans, Exhaust Systems

Mounting

Central hub for motor shaft
