

Radial Fan Impeller

This radial fan impeller is designed for efficient air movement in ventilation and cooling systems. It is constructed from durable plastic, ensuring longevity and resistance to environmental factors.

Product Overview

High-Efficiency Radial Fan Impeller

This radial fan impeller features a precision-engineered design with multiple curved blades arranged around a central hub, optimized for consistent air movement. It is an essential component for ventilation and cooling systems, offering reliable performance in HVAC units and electronic cooling applications. Built from durable, high-quality plastic, this impeller is designed for longevity and resistance to environmental factors, ensuring stable operation under moderate pressure.

Technical Specifications

Design Features

- Curved blade geometry
- Central hub mounting
- High airflow efficiency
- Environmental resistance

Material	Durable Plastic
Typical Applications	HVAC Systems, Electronic Cooling, Ventilation Systems
