

Radiant Space Heater with Multiple Heating Elements

This radiant space heater provides focused warmth with its multiple heating elements. The unit features a rotary control knob, power switch, and ventilation slots for efficient heat dissipation and user-friendly operation.

Product Overview

Efficient Localized Comfort

This radiant space heater is engineered for consistent and efficient localized heating in indoor environments such as homes and offices. Featuring multiple heating elements protected by a robust metal grille, it ensures safety while maintaining high thermal output. Its compact design includes integrated stability feet and optimized ventilation slots for reliable heat dissipation during operation.

Technical Specifications

Control Interface

- Rotary control knob
- Side-mounted power switch

Heating Technology

Radiant Heat, Multi-element

Design and Safety

Ventilation System

Top venting • Bottom venting • Side venting

Safety Features

- Protective metal grille
- Integrated stability feet

Application

Recommended Use

Indoor use for personal comfort in residential or office spaces.
