

Radiant Space Heater with Tilting Head

This radiant space heater provides warmth with its circular heating element. The heater has a tilting head and control knob for adjusting heat direction and intensity.

Product Overview

Efficient Localized Heating

The Radiant Space Heater features an adjustable tilting head, allowing for precise directional heat flow exactly where you need it most. Designed for indoor environments, the circular heating element provides rapid, comfortable warmth for small to medium-sized rooms. Its compact footprint and intuitive manual control make it an ideal solution for personal or office workspace heating.

Technical Specifications

Heating Mechanism	Radiant heating element
