

Radio Communication Antennas for Wireless Devices

These radio communication antennas come in varying lengths and designs to suit different frequency bands and applications. They feature robust construction and secure connectors, ensuring reliable performance in diverse environments.

Product Overview

High-Performance Radio Communication Antennas

This collection of radio communication antennas is engineered for reliable performance across various wireless applications. Featuring robust construction and secure connectors, these antennas are optimized for handheld radios, mobile devices, and wireless equipment. The diverse range includes stubby, telescopic, and whip designs to ensure enhanced signal strength and clarity in demanding environments.

Technical Specifications

Available Models

- JBA-807
- JBA-808
- JBA-809
- JBA-810
- JBA-811
- JBA-812

Suitable Applications

Handheld Radios • Mobile Devices • Wireless Equipment

Antenna Form Factors

Stubby, Telescopic, Whip
