

Radio Frequency Signal Antenna with 75Ω Cable

This antenna is designed for receiving and transmitting radio frequency signals. It features a robust construction with a connector for easy integration into various electronic systems.

Product Overview

Professional RF Antenna Solution

This Radio Frequency Signal Antenna is designed to provide reliable signal reception and transmission for various electronic systems. Featuring a robust construction and a standard 75Ω impedance, it ensures consistent performance for your wireless communication needs. Its compact design allows for versatile installation, making it suitable for both indoor and outdoor environments.

Technical Specifications

Impedance

Model Number	WE-9004
Cable Length	1.2 m
Application Compatibility	Indoor Use, Outdoor Use, RF Signal Transmission, RF Signal Reception
