

Radio Signal Receiver Antenna with Spring Coil

This antenna is designed for receiving radio signals. It features a spring coil section for flexibility and durability.

Product Overview

High-Performance Spring Coil Antenna

This radio signal receiver antenna is engineered for reliable signal reception in various communication devices. Featuring a robust spring coil design, it offers enhanced flexibility and durability against mechanical stress. It comes fully equipped with the necessary cable and connector, ensuring a seamless integration process for professional radio receiver setups.

Technical Specifications

Key Features

- Flexible spring coil construction
- Durable design for signal stability
- Includes cable and connector
- Easy installation

Model Number	101-06-01
Antenna Type	Spring Coil Antenna
Applications	Radio Receivers, Communication Devices
