

Rail Transit Engineering System

This system manages complete rail systems, including rolling stock, signaling, and infrastructure. It combines transversal know-how as a multi-specialist manufacturer.

System Overview

Turnkey Rail Infrastructure Solution

This advanced rail transit engineering system provides a comprehensive, turnkey solution for complex transportation projects. By integrating rolling stock, signaling, telecommunications, and heavy-duty infrastructure, the system ensures precision and operational stability. Designed for rapid deployment in large-scale urban developments, it offers a versatile framework for tramway operations and high-speed infrastructure needs.

Technical Features

Included Components

- Rolling stock (Tramways)
- Signalling systems
- Telecommunications
- Pre-fabricated concrete sleepers
- Heavy-duty steel rails
- Depot facilities
- Electrical substations

Core Capabilities

Turnkey Project Management, High-Speed Infrastructure, Track Installation, Precision Alignment, Electric Power Systems

Operational Metrics

Deployment Specifications

30 Vehicles

Rolling Stock Units
