

Railway Flatcar for Oversized Loads

This specialized railway flatcar is designed for transporting oversized or heavy loads. Its low deck and multiple axles accommodate items such as heavy machinery, construction equipment, and industrial components on railway lines.

Product Overview

Industrial Transport Solution

This specialized railway flatcar is engineered specifically for the transport of oversized and heavy industrial cargo. Featuring a robust multi-axle configuration and a low-profile deck, it provides maximum stability and vertical clearance for large items. It is an ideal solution for logistics providers requiring secure transit for heavy machinery, construction equipment, and large-scale industrial components.

Technical Specifications

Capacity Rating

600 T

Model Capacity Rating

Key Design Features

Multi-axle configuration, Low deck profile, Oversized load compatibility, Heavy-duty construction

Applications

Suitable Cargo Types

- Heavy machinery
- Construction equipment
- Industrial components
