

Railway Suction Sewage Truck

This specialized truck is designed for efficient waste management in rail transit systems. It features a robust chassis and a large-capacity tank for collecting and transporting sewage.

Overview

Specialized Rail Transit Waste Management

This railway suction sewage truck is engineered specifically for the demanding requirements of rail transit systems. It combines a robust, high-capacity waste tank with a powerful, high-performance suction pump to ensure efficient and rapid waste removal from railway facilities. Designed for reliability and ease of operation, this unit is an ideal solution for international engineering contracting projects requiring durable and effective sanitation infrastructure.

Technical Specifications

Export Status

Export Ready • Engineering Project Grade

Primary Application

Railway transit system waste management and sanitation

Key Features

High-performance suction, Large-capacity tank, Robust chassis, Easy maintenance
