

# Railway Tank Car for Liquid Transport

This railway tank car is designed for transporting liquids. The tank is mounted on a railway car chassis and includes safety railings and filling equipment.

## Product Overview

### Industrial Liquid Transport Solution

The RD424 railway tank car is a high-capacity vessel engineered specifically for the safe and efficient transport of bulk liquid products, including petroleum and chemicals. Designed with durability and industrial safety in mind, it features a robust cylindrical tank mounted on a multi-axle chassis for stable transit. The unit includes integrated safety railings and dedicated filling and emptying equipment to facilitate seamless logistics operations.

## Technical Specifications

### Capacity

**150 m3**

Internal Volume/Capacity

### Model ID

RD424

### Transport Types

Petroleum Products, Industrial Chemicals, Bulk Liquids

## Operational Features

### Safety Equipment

- Top-mounted safety railings
- Secure filling interfaces
- Dedicated emptying mechanisms
- Heavy-duty multi-axle chassis
