

Railway Track Fastening Bolts

These high-strength fasteners are designed for railway track construction and maintenance. The bolts feature a unique thread pattern for secure anchoring in wooden or concrete ties.

Product Overview

Railway Track Fastening Solutions

These high-strength fasteners are engineered specifically for the demanding requirements of railway track construction and maintenance. Designed for secure anchoring in both wooden and concrete ties, they provide essential structural stability under heavy loads. Available with specialized surface treatments like galvanization and black oxide, these bolts ensure long-term corrosion resistance in diverse environmental conditions.

Technical Specifications

Tie Compatibility

- Wooden ties
- Concrete ties

Thread Size	M24
Grade Rating	170
MIL Standard	MIL12
Surface Treatments	Galvanized, Black Oxide
