

Rain Gutter and Downpipe Forming Machine

This rain gutter and downpipe forming machine efficiently produces metal downspout pipes for building drainage systems. The fully automatic machine includes a decoiler, roll forming system, PLC, cutting device, and run-out table, and can be used with an elbow machine to create different pipe shapes.

Product Overview

Professional Rain Gutter & Downpipe Forming Solution

This fully automatic roll forming system is engineered for the high-precision production of metal water drainage pipes and gutter systems. The line integrates decoiling, forming, PLC-controlled cutting, and a run-out table to ensure consistent output and durability. Ideal for building contractors, this machine combines safety, aesthetic shaping, and reliable performance to create essential rainwater management infrastructure.

System Configuration

Included Components

- Decoiler
- Roll forming system
- PLC control unit
- Cutting device
- Run-out table

Performance & Certification

Certifications & Standards

CE, ISO 9001:2000, SGS, TÜVRheinland, Bureau Veritas

Service & Logistics

Production Lead Time

30 days

Technical Support

Lifetime technical support with free replacement of non-artificial broken parts; onsite technician assistance available.
