

# RCA to 3.5mm AV Cable

This audio and video cable features a composite RCA connection on one end and a 3.5mm auxiliary connector on the other. It is commonly used to connect older video devices with RCA outputs to devices with 3.5mm input jacks for audio and video signal transmission.

## Product Overview

### Versatile AV Connectivity

This composite RCA to 3.5mm auxiliary cable is designed for seamless audio and video signal transmission between legacy and modern devices. Featuring standard color-coded connectors, it ensures easy identification and reliable connectivity for your multimedia setup. It is an essential tool for integrating older video equipment with modern displays or input jacks.
