

RDD6 Series Industrial Signal Light

The RDD6 series signal light is designed for industrial applications requiring reliable visual indication. It operates at U_i :660V and U_e : AC380V, conforming to GB14048.5 standards.

Product Overview

Industrial Signal Light Performance

The RDD6 series industrial signal light features high-brightness LED chips designed for long service life and low energy consumption. Engineered with premium imported materials, these lights are wear-resistant and highly durable, capable of maintaining reliable performance in high-vibration environments. They serve as critical components for visual status indication, accident alerts, and pre-announcement signals across various industrial sectors.

Technical Specifications

Rated Operational Voltage (U_e)

- AC 220V
- AC 380V

Vibration Frequency Tolerance

2 Hz

Min Frequency

80 Hz

Max Frequency

Rated Insulation Voltage (U_i)

660 V

Acceleration Tolerance

0.7 G

Compliance and Usage

Typical Industrial Applications

- Power Systems
- Telecommunications
- Machine Tools
- Shipping Industry
- Textile Manufacturing
- Printing Equipment
- Mining Machinery

Standards Compliance

GB/T 14048.5
