

Rebar Bending Machine

This reinforcing bar bender is designed for bending rebar in construction and industrial applications. It features adjustable bending angles and multiple bending dies to accommodate various rebar sizes and shapes.

Product Overview

Industrial Rebar Bending Solution

This robust rebar bending machine is engineered for high-efficiency operations in construction sites and steel fabrication shops. Featuring a heavy-duty frame and a powerful motor, it ensures consistent, high-precision results for various rebar sizes. With its hydraulic control system and adjustable bending settings, it provides the versatility required for demanding industrial prefabrication tasks.

Technical Specifications

Safety Equipment

- Emergency stop button
- Protective safety guards

Recommended Applications

Prefabrication yards • Construction sites • Steel fabrication shops

Core Features

Heavy-duty frame, Hydraulic control, Adjustable bending angles
